

# Client-Side Phishing Report

## Introduction

---

This report presents the results of a client-side phishing exercise conducted by Core Impact. A phishing attack sends an email to one or more email addresses attempting to trick the recipients into following a link that could either redirect them to an external webpage (*Web Page Redirect*) or to a webpage controlled by the tester that will impersonate a login page or other web form (*Web Page Clone*).

The goal of the *Web Page Clone* attack is to learn recipients' credentials (or other sensitive information) for a particular service, requiring the end user to enter such information. Although control of hosts is not directly obtained, credentials gathered could be used to further abuse the service being impersonated. Information not otherwise available may be obtained using victims' credentials.

## Workspace Summary

WORKSPACE NAME	STARTED	FINISHED	EXACT TIME	RUNNING TIME	COMPANY/TEST AREA NAME
Demo	01/13/17 12:08 pm	01/13/17 04:14 pm	4h 6m 39s	23m 54s	N/A

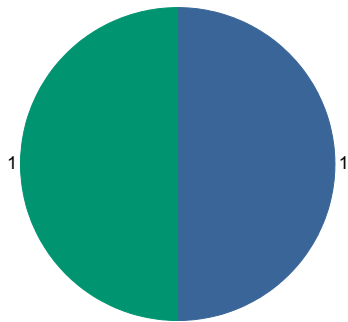

## Summary of Phishing Tests

---

Total number of targets attacked:	2
Total number of targets that viewed the attack email (*):	0
Total number of targets that visited the phishing site:	1
Total number of targets that submitted data:	1
Percentage of targets that viewed the attack email:	0.00%
Percentage of targets that visited the phishing site:	50.00%
Percentage of targets that entered data to the phishing site:	50.00%

(\* ) = Targets instructed email client to display external elements.

## Phishing Attacks

Web Page Clone

### Phishing Attacks Details

Total Emails Sent: 2  
 Total Clicked Links(\*): 0  
 Data Submissions: 1

Attacks with no result	50.0%
Clicked link on phishing site	0.0%
Data Logged on the phishing site	50.0%
Total:	100.0%

(\* In case of a Web Page Clone attack where the target submitted data, the click isn't counted.

## Details of Phishing Attacks

Name	Email	Attack Type	Total Clicks	Data Submitted	Last Activity Date
	user@vmcorelab.com	Web Page Clone	0	No	
Victim	victim@localhost.com	Web Page Clone	1	Yes	01-13-2017 14:45:11

## Details of Web Page Redirect Attacks

- No Web Page Redirect attacks were found on the selected workspace

## Details of Web Page Clone Attacks

### Information submitted by targets

Name	Email	Cloning URL	Forms Collected
Victim	victim@localhost.com	http://www.linkedin.com	Data Saved: Yes Password Fields session_passw password123 Visible Fields session_key: brittany@core.com Hidden Fields sourceAlias: 0_7r5yezRXCiA_H0 loginCsrParam d6890baa-982e-480 isJsEnabled: false
